University of Washington  
Department of Construction Management  
Academic Quality Improvement Plan Report for AY 2018/19  
Bachelor of Science in Construction Management Program

This report highlights the findings of the AY 2018/19 assessment cycle. It serves as the basis for the faculty and the Construction Industry Advisory Council (CIAC) review during the fall of 2019. Recommendations and any plans for updates will be documented in an “Appendix C: After review report”.

1. Strategic Plan for the Educational Unit
The strategic plan for the University of Washington’s Construction Management department is found in a separate document titled “CM Strategic Plan 2015-2017” dated 8 October 2015.

This plan was reviewed by the faculty and staff in the fall of 2015 and updated in the fall of 2015. A brief version of our Mission, Vision, and Objectives can be found at: http://cm.be.washington.edu/about_cm/mission/

2. Degree Program Assessment Plan
A comprehensive assessment plan provides complete continuous improvement of our undergraduate degree program. AY 2015/6 was the first year of implementation of this plan. The plan was modified in the fall of 2016.

2.1 Undergraduate Program Mission Statement
The construction management program prepares individuals for careers in the construction and related industries by providing a high quality education.

2.2 Degree Program Objectives
The following objectives are part of the strategic plan that relates to the undergraduate program and will be reviewed annually. The framework of these objectives are to provide accessible, challenging, quality, and contemporary educational program that prepares individuals to assume technical and managerial positions in the construction and related industries. Specific objective measurements with results are:

- Number of students admitted each year, between 60-70: Fall 2019: 68
- Number of transfer students admitted each year, > 25%: 2019: 12%
- Placement rate of graduates, > 95%, 97%
- Accreditation by American Council for Construction Education (ACCE): ACCE visit March 2019, outcome of July meeting?
- Provide experiential learning opportunities for students.
  - Number of students with internships, 100%, 100%

A historical representation of this data is found in Appendix A. This data will be reviewed for trends.

2.3. Program Learning Outcomes
The program learning outcomes meet and exceed the student learning outcomes required by ACCE. In addition to the program objectives listed above, the Student Learning Outcomes (SLOs) will be assessed, reviewed, and results acted on annually. Student work was assessed against the standard of the program’s performance criteria. Individual assessment tools for specific SLOs are found in their respective notebooks.

The program’s performance assessment is limited to the 20 SLOs that are being assessed by one direct measure and one indirect measure. Our plan is to directly assess SLO at different times during a student’s tenure. We will also indirectly assess all SLOs as part of the senior exit survey.
2.4 Assessment tools and frequency of use for Student Learning Outcomes (2018/19)
The following table provides a guide for which class has Student Learning Outcomes assessed. Each student learning outcome is assessed at least twice and at least one of these assessments is a direct assessment. DA = Direct Assessment, IA = Indirect Assessment

Student Learning Outcomes
1. Create written communications appropriate to the construction discipline.
2. Create oral presentations appropriate to the construction discipline.
3. Create a construction project safety plan.
4. Create construction project cost estimates.
5. Create construction project schedules.
6. Analyze professional decisions based on ethical principles.
7. Analyze construction documents for planning and management of construction processes.
8. Analyze methods, materials, and equipment used to construct projects.
9. Apply construction management skills as a member of a multidisciplinary team.
10. Apply electronic-based technology to manage the construction process.
11. Apply basic surveying techniques for construction layout and control.
12. Understand different methods of project delivery and the roles and responsibilities of all constituencies involved in the design and construction process.
13. Understand construction risk management.
15. Understand construction quality assurance and control.
16. Understand construction project control processes.
17. Understand the legal implications of contract, common, and regulatory law to manage a construction project.
18. Understand the basic principles of sustainable construction.
19. Understand the basic principles of structural behavior.
20. Understand the basic principles of mechanical, electrical and piping systems.
2. 5. Assessment performance criteria results for Student Learning Outcomes
The following tables list the specifics of the assessment tools used, the performance criteria results used to measure the achievement of a student learning outcome, and the current results. A historical representation of this data is found in Appendix B. This data will be reviewed for trends.

1. Create Written Communication appropriate to the construction discipline

<table>
<thead>
<tr>

Exit Survey results for AY 2016 to 2019

Class of 2016-2019 Exit Survey with Previous Years

Exit Survey Indirect Assessment Measure SLO
Performance Criteria is 3.5
SLO 1: I am able to create oral presentations appropriate to the construction discipline.
SLO 2: I am able to create written communications appropriate to the construction discipline.
SLO 3: I am able to create a construction project safety plan.
SLO 4: I am able to create construction project cost estimates.
SLO 5: I am able to create construction project schedules.
SLO 6: I am able to analyze professional decisions based on ethical principles.
SLO 7: I am able to analyze construction documents for planning and management of construction processes.
SLO 8: I am able to analyze methods, materials, and equipment used to construct projects.
SLO 9: I am able to apply construction management skills as a member of a multidisciplinary team.
SLO 10: I am able to apply electronic-based technology to manage the construction process.
SLO 11: I am able to apply basic surveying techniques for construction layout and control.
SLO 12: I understand different methods of project delivery and the roles and responsibilities of all constituencies involved in the design and construction process.
SLO 13: I understand construction risk management.
SLO 14: I understand construction accounting and cost control.
SLO 15: I understand construction quality assurance and control.
SLO 16: I understand construction project control processes.
SLO 17: I understand the legal implications of contract, common, and regulatory law to manage a construction project.
SLO 18: I understand the basic principles of sustainable construction.
SLO 19: I understand the basic principles of structural behavior.
SLO 20: I understand the basic principles of mechanical, electrical and piping systems.
3. Assessment Implementation Plan
Assessment evaluation data was due to the department chair by the 15th of each month after a quarter ends, except for spring when it is due on 15 June. The senior exit survey was conducted as part of the CM 412 Construction Practices class and results were made available by 15 June 2019. The department chair collated the program assessment data and degree program objectives data for review at both an autumn faculty meeting and the Construction Industry Advisory Council (CIAC) meeting. Recommendations, improvements, corrective actions, and changes will be recorded and reflected in future appendix (C) to this document.

4. Chairs findings and recommendations:
AY 2017/19 was our fourth year of collecting data since significant changes to our assessment plan were made.

ACCE visiting team was in March 2019.

- Are we following ACCE guidelines?
  For the most part, yes, however we had one weakness
  Two SLOs were not properly being assessed
  SLO 11 Apply surveying techniques for layout and control
    We were assessing students ability to create a topographic map, the visiting team did not deem this to be control, students do a lab with layout and control, the assessment tool has been changed.
  SLO 7 Analyze construction documents
    We were assessing student in our plan reading course, the visiting team felt we were assessing to the understand level. We do analyze documents in estimating 1 and the assessment tool is being developed and implemented in CM 331.

- SLO development and data collection
  Still some minor issues with this; it takes some faculty a few prompts to input data or we have lapses due to change in faculty
  SLO 8 and 15 did not have any meaningful data from the CM 323 class and were dropped from collection, these SLO still have at least 2 assessments

- Performance level accomplishment or trends
  From last year’s report
  “Some SLOs have a performance criteria that 100% of the students will earn an X%. We do not meet our performance requirement for several of these and need to consider improvements. Our standard of 100%, while a noble goal, may never be achieved.”

  The faculty decided to lower the performance level to 90% for SLO 1 writing, SLO 4 estimating, and SLO 17 Law. After discussion it appeared what was skewing the data lower awas late submissions. It was felt better to account for this by lowering the standard.

Historical SLO Data
Appendix C
Faculty and CIAC review and recommendations

At the faculty retreat on 17 September 2019 the faculty reviewed the end-of-year report and each SLO assessment data in detail. Assessment data was reviewed by CIAC on 11 October 2019. CIAC reviewed six of the SLOs that they are most concerned with, SLO 1, 4, 5, 12 and 17, CIAC also reviewed SLO 11 and 20 since it appeared students did not meet the performance level in our indirect assessment.

**Overall**
The department now has (in most cases) four years’ worth of data. Most SLOs are being accomplished and are close to or meet performance levels. A few SLOs need attention and will be discussed in further detail.

**SLO 1 Writing**
Students are writing better.
The faculty decided to lower the performance level to 90% for SLO 1 writing. After discussion it appeared what was skewing the data lower was late submissions. It was felt better to account for this by lowering the standard.

**SLO 2 Oral**
Good trend.

**SLO 3 Safety**
Good trends.

**SLO 4 Estimate**
This SLO is another example of having a performance level that 100% of the students will achieve an 80% and the 100 was changed to 90% We are achieving this new standard.

**SLO 5 Schedule**
One section of capstone did not achieve the performance level and was actually quite low…needs to be monitored.

**SLO 6 Ethics**
The students did meet required performance levels and no specific actions are required.

**SLO 7 Documents**
This SLO was changed to be assessed in CM 331 Estimating.

**SLO 8 Methods and equipment**
The students did meet required performance levels and no specific actions are required.
**SLO 10 Technology**
Performance goals are being met and no specific action is required.

**SLO 11 Surveying**
This SLO was changed to assessed a different lab.

**SLO 12 Project Delivery**
Performance goals are being met and no specific action is required.

**SLO 13 Risk**
Students are meeting performance goals and no change is required.

**SLO 14 Accounting**
This class has been moved to the senior year since it is a more advanced topic. It was not offered in autumn 2018.

**SLO 15 Quality**
Performance goals are being met and no specific action is required.

**SLO 16 Control**
Students are meet performance criteria and no specific actions are anticipated.

**SLO 17 Law**
This SLO is another example of having a performance level that 100% of the students will achieve an 80% and the 100 was changed to 90% We are achieving this new standard

**SLO 18 Sustainable**
Performance goals are being met and no specific action is required.

**SLO 19 Structures**
Performance goals are being met and no specific action is required.

**SLO 20 MEP**
An indirect assessment from the students indicates they do not feel they have the knowledge expected from the MEP classes. CIAC specifically discussed that more systems level education was needed in this area. The course focuses on the granular level. Several CIAC members offered to meet with the instructors to review the course material, the chair will facilitate this meeting. Another idea was to have our instructors attend the MEAC “Boot Camp”, the chair will make this training available to the faculty members.
